

OPT 3: TRAIL ACCESS FROM SW ORCHARD ST
ORCHARD ST. RAVINE

DATE: NOV. 28, 2005

This illustrates an option for a stair / trail from the upper end of SW Orchard Street heading southwest down to the cul-de-sac. The slope conditions meet or exceed 40%, have adjacent slide history and appear to have organic soils for the first two feet. Due to the steepness, a structure similar to Option 2 is proposed, then a series of box steps and crushed rock trail through less steep areas.

Trail construction & associated restoration - \$150,000-\$175,000
 Remaining for VMP and Implementation - \$0 - \$25,000
